

ABSTRACT OF THE DISCLOSURE

It is an object of this invention to properly
output sounds in stereo at the time of reproducing of
images in a video camera having a pivotal image display
5 unit. The invention includes an image display unit
which can pivot on an electronic device body and
displays images, first and second sound output units, a
detection unit for detecting pivoting operation of the
image display unit, and a control means for controlling
10 switching of sound signals output to the first and
second sound output units upon pivoting operation of
the image display unit.
